WEEKLY MARKET

WEEKLY MARKET COMMENTARY

February 25, 2019

THE MARKETS

Investors were pleased with the Federal Reserve’s (Fed) new approach to its balance sheet.

The Fed delivered its semi-annual Monetary Policy Report to Congress last week. The report recapped the events of late 2018 and reiterated the Fed’s intention to “...be patient as it determines what future adjustments to the federal funds rate may be appropriate to support the Committee's congressionally mandated objectives of maximum employment and price stability.”

In other words, rate hikes are on hold for now.

The Fed also addressed issues related to its balance sheet, which grew from \$900 billion at the end of 2006 – about 6 percent of the United States’ gross domestic product (GDP) – to almost \$4.5 trillion at the end of 2014 – about 25 percent of U.S. GDP. (GDP is the value of all goods and services produced in the United States in a given period.)

The balance sheet more than quadrupled during the past decade because the Fed began buying Treasuries and mortgage-backed securities, a policy called quantitative easing, in an effort to restore the U.S. economy to health, according to The Hutchins Center of the Brookings Institute.

Friday’s report indicated the Fed will not shrink its balance sheet to pre-crisis levels, reported Erwida Maulia for Financial Times. Markets responded positively to the news:

“U.S. stocks and Treasuries were comfortably higher at midday on Friday as the Federal Reserve signaled it will hold a much larger balance sheet in the long term than it did before the financial crisis, helping ease investor concerns about tightening financial conditions.”

Investors also remained optimistic about trade talks between the United States and China. Major U.S. stock indices finished the week higher.

Data as of 02/22/19	1-Week	Y-T-D	1-Year	3-Year	5-Year	10-Year
Standard & Poor’s 500 (Domestic Stocks)	0.6%	11.4%	3.3%	12.8%	8.6%	14.2%
Dow Jones Global ex-U.S.	1.7	9.1	-9.8	7.7	0.4	7.2
10-year Treasury Note (Yield Only)	2.7	@3	2.9	1.8	2.8	2.8
Gold (per ounce)	1.1	3.9	0.2	3.2	0.1	3.1
Bloomberg Commodity Index	1.4	3.9	-7.4	2.6	-9.3	-2.2
DJ Equity All REIT Total Return Index	0.0	13.7	20.5	10.7	9.7	18.8

S&P 500, Dow Jones Global ex-US, Gold, Bloomberg Commodity Index returns exclude reinvested dividends (gold does not pay a dividend) and the three-, five-, and 10-year returns are annualized; the DJ Equity All REIT Total Return Index does include reinvested dividends and the three-, five-, and 10-year returns are annualized; and the 10-year Treasury Note is simply the yield at the close of the day on each of the historical time periods. SALT WATER HAS AN ECONOMIC IMPACT due to sea levels rising at a more rapid rate during the past three decades, according to the U.S. Global Change Research Program's Climate Science Special Report. Since 1900, sea levels have risen between 7 and 8 inches. Since 1993, they're up 3 inches.

As levels continue to rise, people and companies around the world are likely to be affected. Morgan Stanley reported, "Many coastal cities around the world that look attractive to real assets investors – for example, Miami, New York, Boston, Osaka, Guangzhou, and Mumbai – are particularly vulnerable to flooding and other weather-related problems. And, infrastructure assets favored by investors, like airports, cell towers, and oil and natural gas pipelines, are often located in places prone to storms and extreme heat...Insurance will continue to be an important safeguard, but a limited one."

Protecting property and improving infrastructure is likely to change demand for specific goods and services. Sarah Green Carmichael of Barron's reported, "As we rush to protect basements and beach houses, companies in the home-improvement retail sector should benefit...So should companies that make products to cope with flooding, such as commercial-grade water pumps...Upgrades to infrastructure also mean good news for the construction sector..."

The textile industry – think fabrics and clothing – may also be affected since major exporters like Bangladesh, Indonesia, and the Philippines, which supply 10 percent of the textiles and clothing imported by the United States, are vulnerable to coastal flooding.

Sea level is a macroeconomic issue. It has the potential to affect output and income across the global economy. Investment managers who take a top-down approach to investing consider the ways in which macroeconomic factors, like changing sea levels, could affect the market as a whole, as well as the share prices of specific companies. Bottom-up investors take a different approach. They consider company fundamentals, such as management team and earnings growth potential, first.

Weekly Focus - Think About It

"They always say time changes things, but you actually have to change them yourself."

--Andy Warhol, American artist

Sincerely for the firm,

- * Government bonds and Treasury Bills are guaranteed by the U.S. government as to the timely payment of principal and interest and, if held to maturity, offer a fixed rate of return and fixed principal value. However, the value of fund shares is not guaranteed and will fluctuate.
- * Corporate bonds are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate and credit risk as well as additional risks based on the quality of issuer coupon rate, price, yield, maturity, and redemption features.
- * The Standard & Poor's 500 (S&P 500) is an unmanaged group of securities considered to be representative of the stock market in general. You cannot invest directly in this index.
- * All indexes referenced are unmanaged. Unmanaged index returns do not reflect fees, expenses, or sales charges. Index performance is not indicative of the performance of any investment.
- * The Dow Jones Global ex-U.S. Index covers approximately 95% of the market capitalization of the 45 developed and emerging countries included in the Index.
- * The 10-year Treasury Note represents debt owed by the United States Treasury to the public. Since the U.S. Government is seen as a risk-free borrower, investors use the 10-year Treasury Note as a benchmark for the long-term bond market.
- * Gold represents the afternoon gold price as reported by the London Bullion Market Association. The gold price is set twice daily by the London Gold Fixing Company at 10:30 and 15:00 and is expressed in U.S. dollars per fine troy ounce.
- * The Bloomberg Commodity Index is designed to be a highly liquid and diversified benchmark for the commodity futures market. The Index is composed of futures contracts on 19 physical commodities and was launched on July 14, 1998.
- * The DJ Equity All REIT Total Return Index measures the total return performance of the equity subcategory of the Real Estate Investment Trust (REIT) industry as calculated by Dow Jones.
- * International investing involves special risks such as currency fluctuation and political instability and may not be suitable for all investors. These risks are often heightened for investments in emerging markets.
- * Yahoo! Finance is the source for any reference to the performance of an index between two specific periods.
- * Opinions expressed are subject to change without notice and are not intended as investment advice or to predict future performance.
- * Economic forecasts set forth may not develop as predicted and there can be no guarantee that strategies promoted will be successful.
- * Past performance does not guarantee future results. Investing involves risk, including loss of principal.
- * You cannot invest directly in an index.
- * Stock investing involves risk including loss of principal.
